

Sample Tube Selection for Urine Specimens

Biochemistry tests:

The 10ml yellow urine Monovette® sample tube should be used for all urine Chemistry investigations (excluding 24hrs collections)

The white topped universal container should only be used for non-Gynae cytology

Microbiology tests:

The 10ml green Boric Acid urine Monovette® should be used for Microscopy, Culture & Sensitivity (MC&S) investigation

Instruction for hygienic urine collection with the Urine Monovette®
